Timber Frames of Australia

## Welcome

This photo book has been  
especially designed to give you a little insight  
into the craft of traditional timber framing  
in our modern days.

We take great pride in our trade, products and service.

Please enjoy this book  
which shall be a bridge between  
**Modern Efficiency & Timeless Tradition.**

Timber Frames of Australia  
Quality • Strength • Beauty • Sustainability

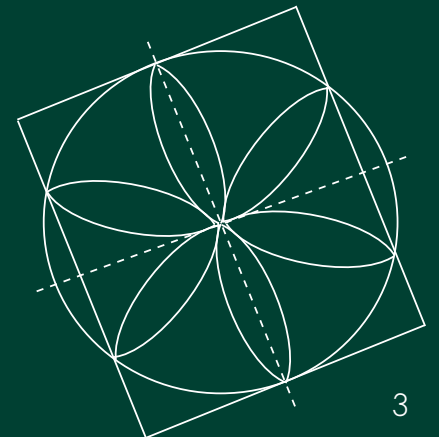

# Our Craft

---

We are Australia's leading traditional timber framing company. Specialising in wooden pegged mortice and tenon joinery, our craftsmen create structural frames of exceptional quality, strength and beauty.

Our products range from custom house frames, extensions and garages to verandahs and pergolas. Frames are crafted using timber from sustainable sources, applying the same traditional framing techniques that have been developed through the ages.

At Timber Frames of Australia we are passionate about what we do. Our pride in our craft is evident in every structure we create.

## Timeless Tradition

Pegged mortice and tenon timber framing is an ancient building form.

This technique dates back to approximately 950 AD in Europe.

Large section timbers are jointed to create a structural framework which is secured by using hand-crafted wooden pegs.

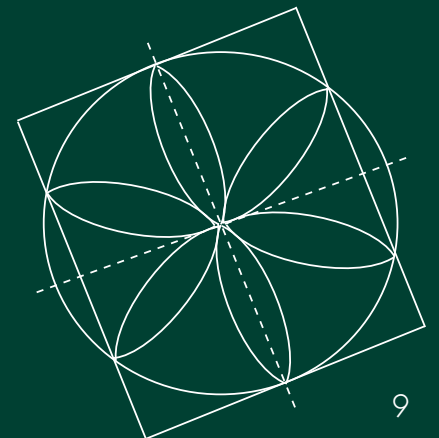

# House Frames

---

Our clients choose to make their dreams a reality with a house frame custom made to their specifications - contemporary or heritage.

Whether building from scratch or extending existing homes, we design frames to suit smaller studios and cottages or expansive family residencies.

## Quality

The quality of our work and our attention to detail is second to none.

Extensive hand-crafting and finishing leads to a work of enduring quality, driven by our passionate approach to our craft.

## Strength

Crafted from Red Ironbark, Spotted Gum, Cypress or recycled timber - each frame is a unique testament to the strength and durability of traditional timber framing.

The majority of the timber used for our frames is naturally termite resistant. Our structures are engineered to best suit the Australian climate and soil conditions.

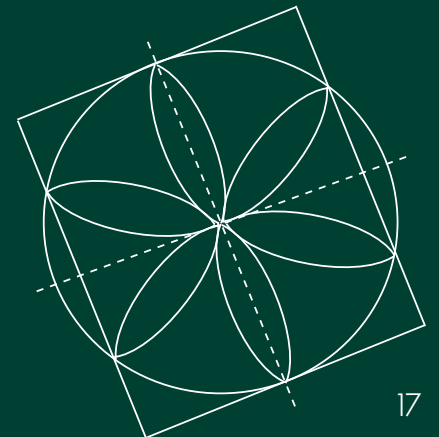

# Garden Structures

---

Our traditionally crafted garden structures truly stand out from the rest.

We design and craft pergolas, verandahs, decking and carports that transform outside areas into intriguing living spaces.

## Beauty

The large-section timbers, skilled joinery techniques and even the hand-crafted pegs, all contribute to the beauty and distinctive style of each frame.

## Sustainability

A traditionally crafted timber frame is a truly sustainable choice.

We use timber from sustainable sources, and there are no nails or glues used in our frames, giving you a healthy choice.

Our own 20kW solar power system provides all the electricity required to craft these remarkable frames.

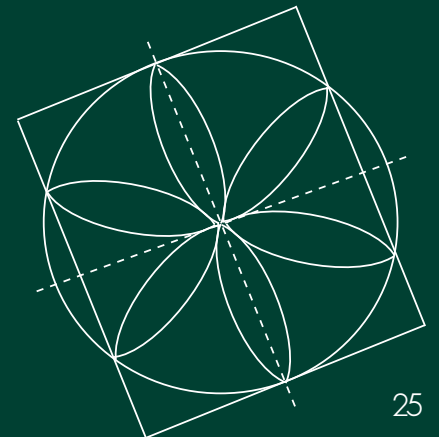

# The Design Process

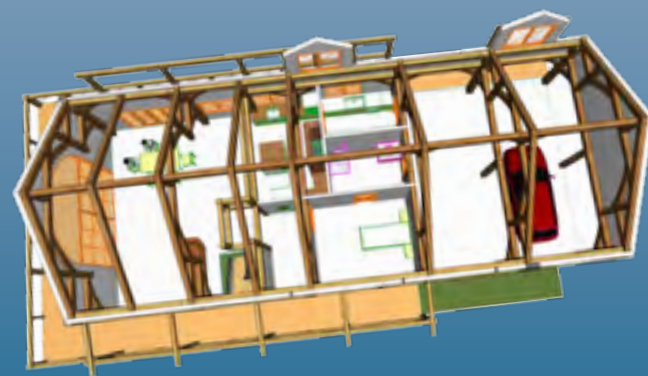

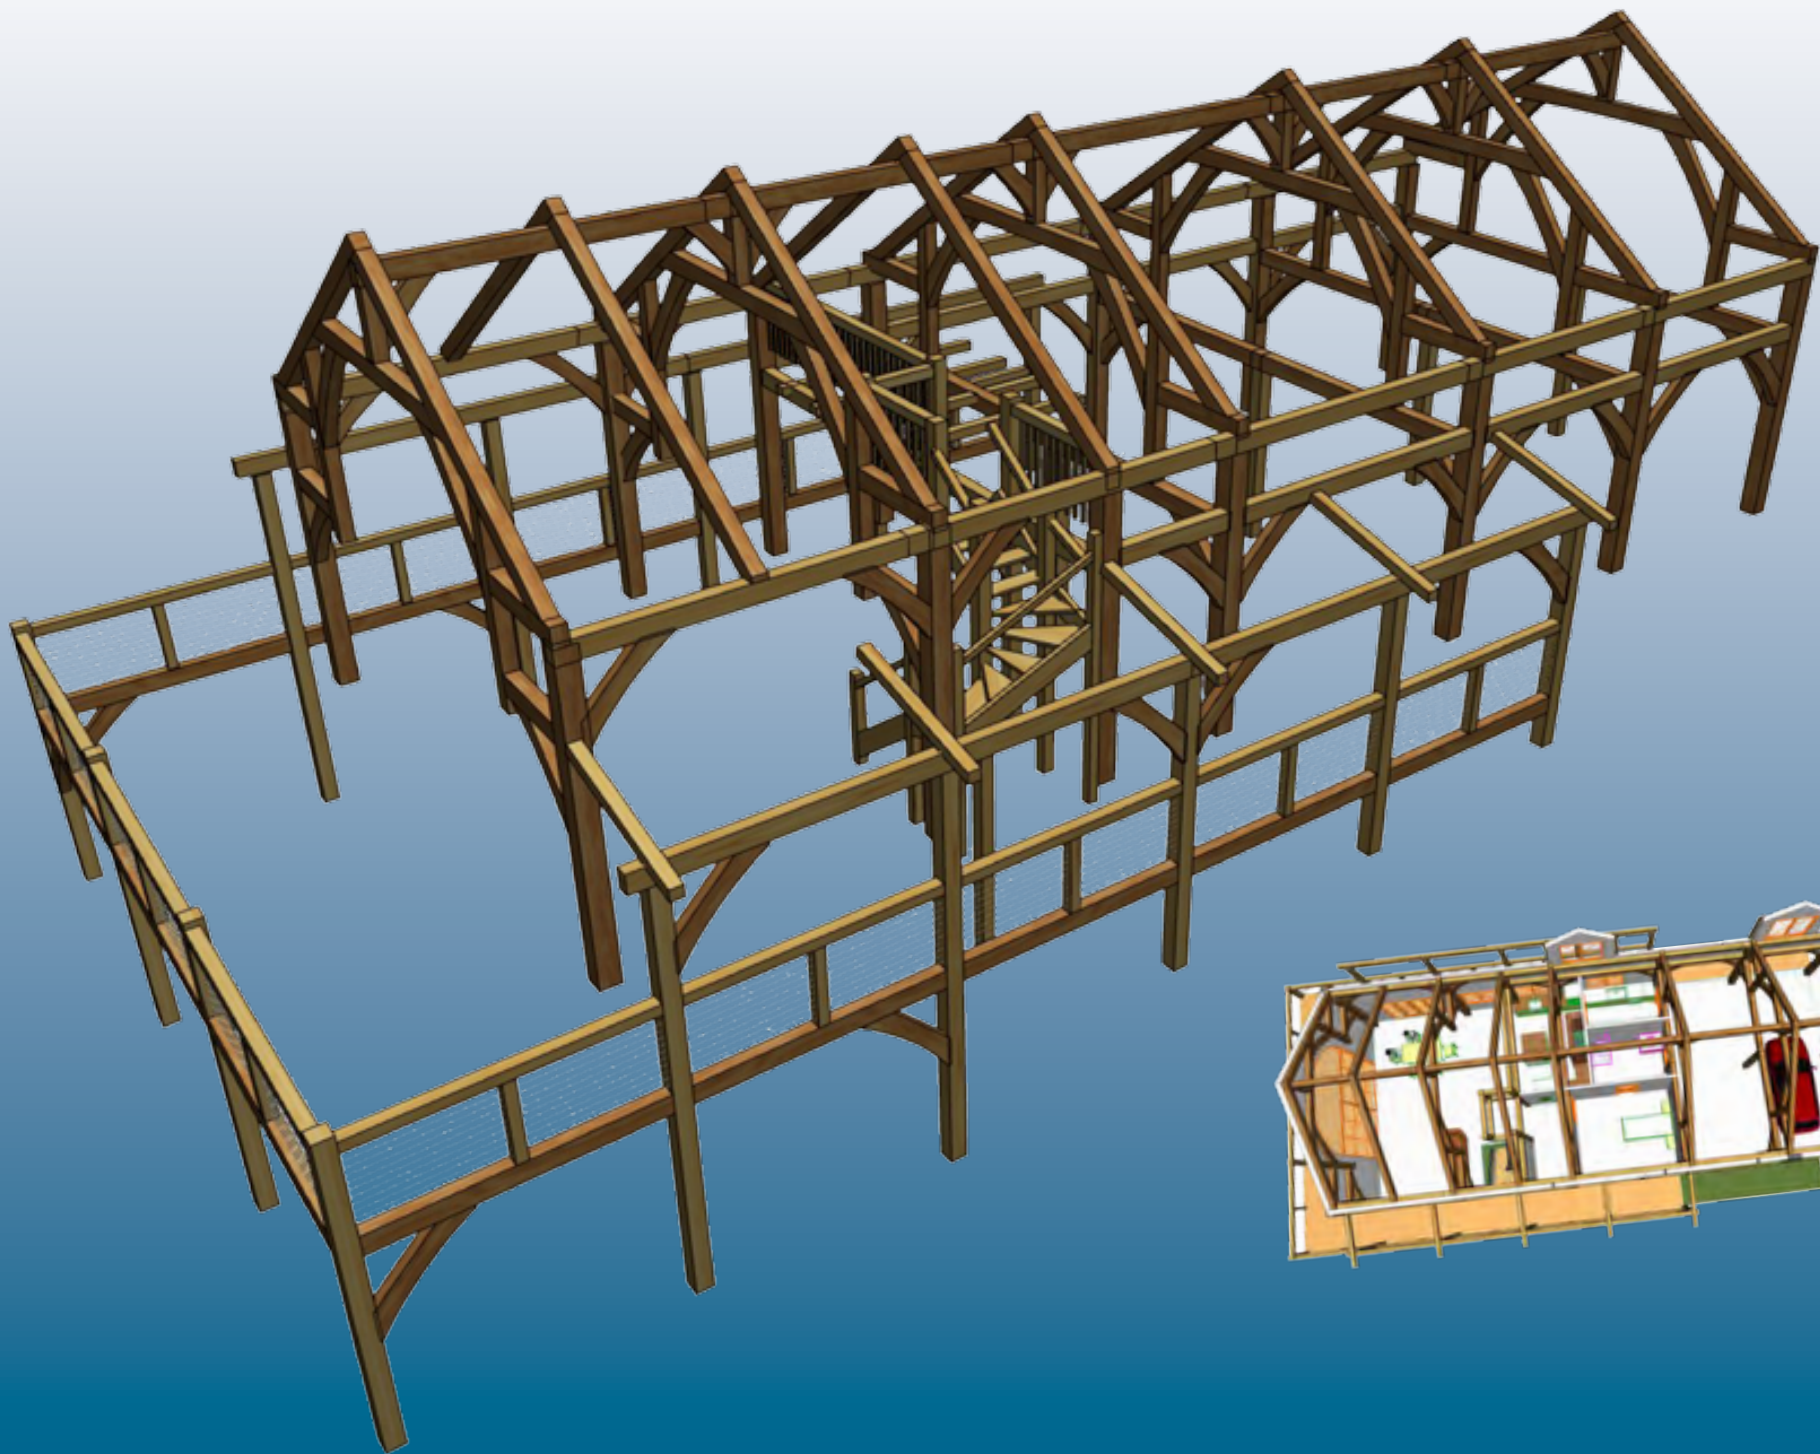

---

The majority of our work involves creating bespoke frames.

We work closely with our client to create the perfect frame for each project and to ensure the delivery of the desired result and to exceed expectations.

## Modern Efficiency

We use a sophisticated 3D architectural drawing program to design each frame according to clients' specifications.

Following client confirmation, council and engineering approvals the timbers are ordered. The crafting and test assembly in our workshop is done prior to the frame being shipped to site for raising.

Throughout the process we ensure that efficiency and client satisfaction are the hallmarks of each project.

## Professional Associations

We are proud to be a member of:

- The Master Builders Association  
South Australia
- The Carpenters' Fellowship  
United Kingdom
- The Timber Framers' Guild  
USA
- Trees for Life  
Australia

Timber Frames of Australia is a builders' licence holder, therefore the involvement of another company regarding the structure is not necessary.
